

## Instructions for use **Textile Guard Eco RT** with a new recipe

Before use, follow the manufacturer's care instructions. The tolerance possibly check in a hidden place.

Wash textiles with "**Fibertec Pro Wash Eco**" before impregnating. Take the freshly washed textile out of the washing machine and let it drain for at least 10 minutes.

### Apply impregnation:

1. Shake the bottle well (if necessary, fill the refill bag into the spray bottle beforehand), press and turn the spray head lock,
2. Lay dry or damp clothing on a non-sensitive surface.
3. Spray clothing thinly and evenly.  
(120-150 ml are usually enough for 1 hard shell jacket or soft shell jacket, size L)  
Then spread the impregnation on the fabric with a sponge and rub into the fabric. An even application avoids staining. This way the whole outside treat the clothing. Collars, cuffs and cuffs can also be treated from the inside to counteract wicking.
4. Hang clothes on a wide hanger and at room temperature (approx. 20°C) 12-24 hours. Tip: Place an old cloth or piece of cardboard underneath in case clothing drips if you apply too thick.
